

GEN-L

Provides up to 6,000 liters of fresh, clean drinking Water From Air daily

GEN-L is Watergen's largest water generator that produces up to 6,000 liters of drinking water per day. It is a reliable source of fresh, clean drinking water, requiring no infrastructure other than electricity. This plug-and-drink solution is designed to meet the needs rural villages, off-grid settlements, army bases, manufacturing facilities, hospitals, large mines and construction sites and other decentralized applications seeking a new drinking water source, where there is no access to clean drinking water or the current water sources are contaminated.

Each GEN-L is built as a modular unit, so, as water requirements grow, it can be quickly and easily integrated with other units to create drinking water from air production farms.

The GEN-L's inbuilt heat-exchanger produces drinking water in a wide range of climate conditions: from 15°C and 20% humidity. To ensure the high quality of the water generated and maintain freshness and purity regardless of air quality, a builtin multi-barrier air filtration system removes microparticles and organic traces and adds essential minerals.

GEN-L is producing drinking water from air in scores of countries and in the toughest terrains; providing high-quality drinking water across the globe.

GEN-L Advantages

Fresh, safe drinking water from air throughout the day

Water production is at the point of use

Produces up to 6,000 liters of drinking water per day

Reduces logistic, transportation, storage and plastic waste

Water production starts from 15°C and 20% humidity

Can integrate with other units to create drinking water from air production farms

Off-the-grid solution, no plumbing needed

Complies with international drinking water safety standards

Specifications

Water generation capacity	Up to 6,000 liters / 1,585 gallons a day
Electricity supply	EU: 400 Vac, 50 Hz, 3 Phases US: 480 Vac, 60 Hz, 3 Phases
Water generation efficiency	350 Wh/liter
Dimensions (LxWxH)	2.85m x 2.23m x 2.64m / 112" x 87.8" x 103.95" (Height size considered with legs)
Weight	2,630 kg / 5,800 pounds
Energy consumption	Nominal 60 kW/h, Peak power up to 90 kW/h
Air filtration	Sub-micron barrier filter that eliminates <2.5 particulate matter
Water purification	Multi step filtration cascade of water certified filters set, followed by a germicidal UV lamp. Vital minerals balance the water pH to achieve high purification and tasty drinking water.

Applications

Hospitals

Army bases

Rural villages

Factories

Mines and construction sites

Greenhouses

About Watergen

Founded in 2009, Watergen has devoted its innovative technology towards solving the world's water crisis, to provide a game-changing water-from-air solution based on its proprietary patented GENius technology which uses humidity in the air to create clean and fresh drinking water to people everywhere. The company offers a range of water atmospheric generators (AWG) for various applications; the home-office scale GENNY can produce up to 30 liters of water per day, the medium-scale GEN-M that produces up to 800 liters of water per day and the industrial, large-scale generators that can make as many as 5,000 liters of water per day. Watergen's AWGs are installed in numerous countries around the globe.
